**Ethylene Oxide Who** - [Free] *Ethylene Oxide Who* [PDF] [EPUB] Ethylene Oxide 1 FOREWORD Concise International Chemical Assessment Documents (CICADs) are the latest in a family of publications from the International Programme on Chemical Safety (IPCS) — a cooperative programme of the World Health Organization (WHO), the International Labour Organization (ILO), and the United Nations - Mon, 14 Oct 2019 19:31:00 GMT Guidelines for the distribution of Ethylene Oxide Ethylene Oxide - US EPA Ethylene oxide is also used as a sterilizing agent for medical equipment and a fumigating agent for spices. The acute (short-term) effects of ethylene oxide in humans consist mainly of central nervous system depression and irritation of the eyes and mucous membranes. ETHYLENE OXIDE - monographs.iarc.fr Ethylene oxide is an important raw material used in the manufacture of chemical derivatives that are the basis for major consumer goods in virtually all industrialized countries. Figure 1 gives an overview of global industry demand for ethylene oxide by application. More than half of the ethylene oxide produced worldwide is used in the TOXICOLOGICAL PROFILE FOR ETHYLENE OXIDE Ethylene oxide (also known as EO or oxirane) is a flammable gas with a somewhat sweet odor. It dissolves easily in water, alcohol, and most organic solvents. Ethylene oxide is produced in large volumes and is used to make other chemicals, especially ethylene glycol, a chemical used to make antifreeze and polyester. Most ethylene oxide is used up in the Ethylene oxide - apps.who.int Description First draft prepared by R. G. Liteplo, M. E. Meek and M. Lewis Published under the joint sponsorship of the United Nations Environment Programme, the International Labour Organisation and the World Health Organization, and produced within the framework of the Inter-Organization Programme for the Sound Management of Chemicals Ethylene Oxide - an overview | ScienceDirect Topics Ethylene oxide is produced by the vapor phase oxidation of ethylene. There are various processes; some use air and some use oxygen, but otherwise the processes are broadly similar. It is used primarily for the production of ethylene glycol, which in turn is used in roughly equal proportions as antifreeze and for production of polyesters. 'Ethylene Oxide,' in: Ullmann's Encyclopedia of Industrial ... Hydrogen Atom. Ethylene oxide reacts with compounds containing a labile hydrogen atom to form a product containing a hydroxyethyl group:xs Figure 2. What is the public health risk of EO? As an intermediate chemical used to make other products, almost all of the EO is reacted with other substances to form new products. Potential exposure, if any, to the
