Heterocycles in drugs and drug discovery This is a reflection of the central role that heterocycles play in modern drug design. They can serve as useful tools to manipulate lipophilicity, polarity, and hydrogen bonding capacity of molecules, which may lead to improved pharmacological, pharmacokinetic, toxicological, and physicochemical properties of drug candidates and ultimately drugs. Substructure analysis of approved drugs and drug candidates in clinical trials was performed to illustrate the evolving roles of heterocycles in pharmaceutical research. The increasing representation of biaryls and heteroaromatics is noted and attributed predominantly to their better accessibility brought upon by advances in metal catalyzed cross-coupling and hetero-coupling reactions.
