Networked Control Systems many success stories in a wide variety of applications. Future applications of control will be much more information-rich than those of the past and will involve networked communications, distributed computing, and higher levels of logic and decision-making (see [Mur03] for a recent analysis of future directions in this area). New theory, algorithms, and demonstrations must be developed in ... Networked Control Systems: Theory and Applications ... Networked control systems (NCS) consist of sensors, actuators and controllers the operations of which may be distributed over geographically disparate locations and co-ordinated by the exchange of information passed over a communication network.
